

# Loading Arms

Top and Bottom Loaders for Trucks and Rail Cars

We offer loading arms that allow you to easily handle anything from water & food products to your most aggressive chemicals and acids!

## Benefits

- Superior design and flexibility
- Loading arms offer an easy adjust compression spring with unparalleled range of motion
- Will coordinate the integration of loading arm design with the access equipment operating envelope
- Large range of loading arms from 2" to 8"
- Better than industry standard delivery times

Designed to meet your  
specific needs

**Carbis** – the exclusive source for the only manufacturer that makes fall protection equipment and loading arms all under one roof.

Powered arms and vapor recovery  
systems available

We offer all styles and sizes of loading arms engineered to work with our fall protection equipment.

## Create an Operator Friendly Environment

The integration of loading arms and access equipment helps create an operator friendly environment which, in turn, improves safety and increases productivity.

## Fastest Shipping in the Industry

We understand the impact a non-operational loading arm can have on your facility. That's why we offer the fastest delivery time in the industry.

## Safety Issue

As with all Carbis products, safety is our number one concern; this is why all of our arms that need balancing use an enclosed spring cylinder. With this design, the arm will not fall catastrophically in the event of spring failure.

## Swivel Joints

With over \$65,000,000 of inventory, chances are we have the Swivel Joint you need in stock ready to ship today!
